Transportation Management System for global success

All modes. All transports. Inbound and outbound. Understand, optimize, and execute your local and international transportation processes in one platform.

7,000+ satisfied companies – become one of them

Transportation management is a matter of trust – especially in times of extreme volatility and uncertainty. So it's good to know that over 7,000 businesses around the world put their trust in AEB software. That we have been optimizing our customers' supply chains for over 40 years. That AEB is owned by its employees, and that these employees are dedicated to its sustainable growth – for a successful long-term collaboration with customers and partners.

The centralized cloud platform for supply chain collaboration

AEB transport management software enables networked collaboration with customers, suppliers, partners, and other supply chain players. For a smoother flow of information and greater visibility. And for process automation of up to 100%.

Enhanced supply chain visibility and collaboration

Centralized control and visibility for enhanced transport planning and greater agility in responding to disruptions and deviations.

- Single supply chain visibility interface for all data
- Digital twin for planning and automation
- Control tower for visibility, monitoring, and control across all goods movements
- Comprehensive analytics and business intelligence
- Easily measure, manage, and minimize CO2 emissions

Smarter transport planning & optimization

Plan the inbound and distribution logistics of your shipments and transports. AEB transport management software supports operational planning when you're consolidating consignments and looking for the right transport routes and partners.

- Automated planning of all transport activities
- Multi-leg planning and selection: Route, mode, carrier, rate
- Automated load consolidation: Freely defined strategies that can be adapted at any time

activities te, mode, carrier, rate defined strategies that
