Our Solutions at a glance

## ELSE – PROVEN AND COST-EFFECTIVE SOLUTIONS FOR PRODUCTION, AUTOMATION AND LOGISTICS

We provide innovative software solutions that help companies achieve the highest quality and efficiency in their warehouse management and logistics. Our high-performance systems ensure transparency, speed, and user-friendliness in all areas of warehouse logistics – from goods receipt to shipping.

### ELSEWARE WMS (WAREHOUSE MANAGEMENT SYSTEM)

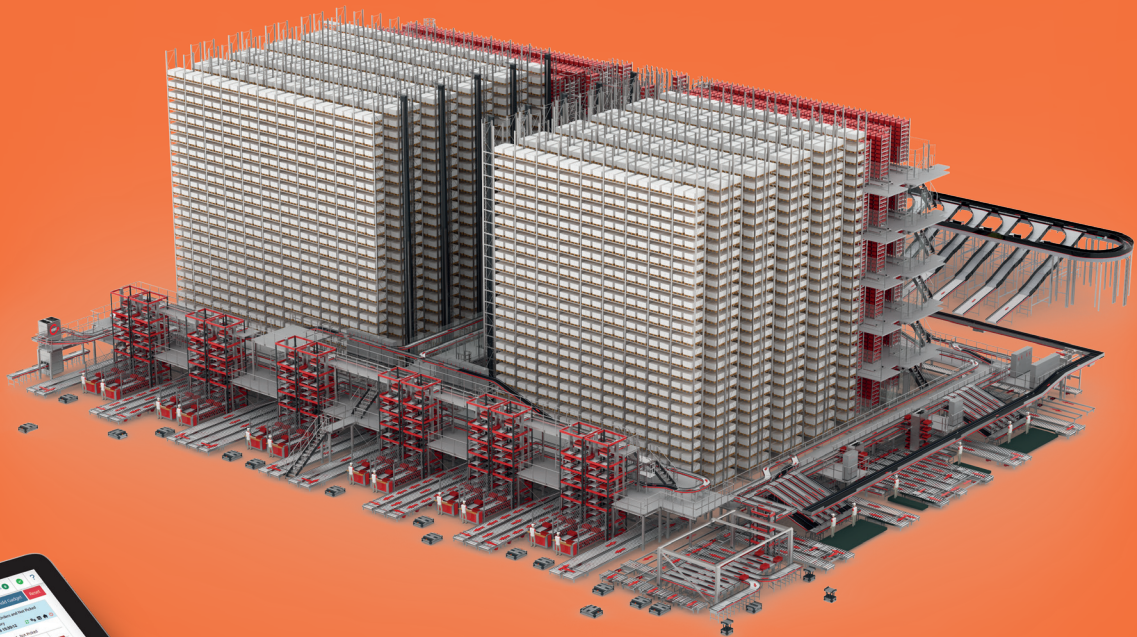

The ElseWare WMS (Warehouse Management System) is an innovative and flexible system that can be used in both manual and automated warehouses. It optimises intralogistics processes in buffer production warehouses and in B2B and B2C distribution centres.

---

Seamless integration with ERP and WCS systems from a wide range of providers enables complete coordination and management of all warehouse movements. With ElseWare WMS, you can unify or manage both manual and automated processes separately to ensure optimal transparency and efficiency.

---

#### Features of ElseWare WMS:

- Management of inbound goods and cross-docking
- Implementation of inventories
- Efficient order processing and picking
- Support for value-added services (VAS)
- Packaging and shipping solutions
- Flexible configuration of storage, replenishment and picking strategies

## ELSEWARE WCS (WAREHOUSE CONTROL SYSTEM):

ElseWare WCS (Warehouse Control System) is a robust solution specifically designed to manage and control material handling equipment (MHE) efficiently. It facilitates real-time information exchange with a Warehouse Management System (WMS) and various automated material handling systems, enabling it to make intelligent decisions based on equipment status and sophisticated algorithms.

The ElseWare WCS features a flexible and vendor-independent design, allowing seamless integration of different MHE manufacturers and WMS providers to optimise warehouse performance. Additionally, the system monitors, controls, and diagnoses your material handling equipment in real time, ensuring maximum efficiency and reliability.

Our software facilitates advanced processes in goods receipt, picking, packaging, and shipping, allowing for the implementation of multiple rules to ensure flexible and efficient warehouse operations.

# »YOUR BUSINESS, YOUR WAY«

## **AUTOMATED WAREHOUSING SOLUTIONS WITH ELSEWARE AGV:**

Our AGV (Automated Guided Vehicles) system offers flexible and efficient automation solutions for a wide range of warehouse environments, from small warehouses to large, high-density distribution centres. It supports single-level and multi-level shuttle systems as well as mobile pallet racks, ensuring smooth material flow. Seamlessly integrated with the ElseWare WMS, the AGV system optimises order management, inventory planning and resource utilisation.

It automatically prioritises orders and selects the best storage locations, increasing efficiency through intelligent order allocations. Alternatively, it can be linked to other WMS systems to provide a tailored automation solution.

# ELSE AB, THIS IS US!

For over 20 years, we have been developing innovative solutions that enhance efficiency and automation in logistics and production environments worldwide. We combine extensive expertise with cutting-edge technology as a company within the GEBHARDT Intralogistics Group, based in Gothenburg, Sweden. Since our founding in 2001, we have established ourselves as pioneers in Warehouse Management Systems (WMS) and Warehouse Control Systems (WCS). Our mission is to boost your competitiveness through tailored software solutions and to create groundbreaking innovations that address the demands of a digitalised and automated logistics landscape.
