

GEBHARDT Workstation Solutions

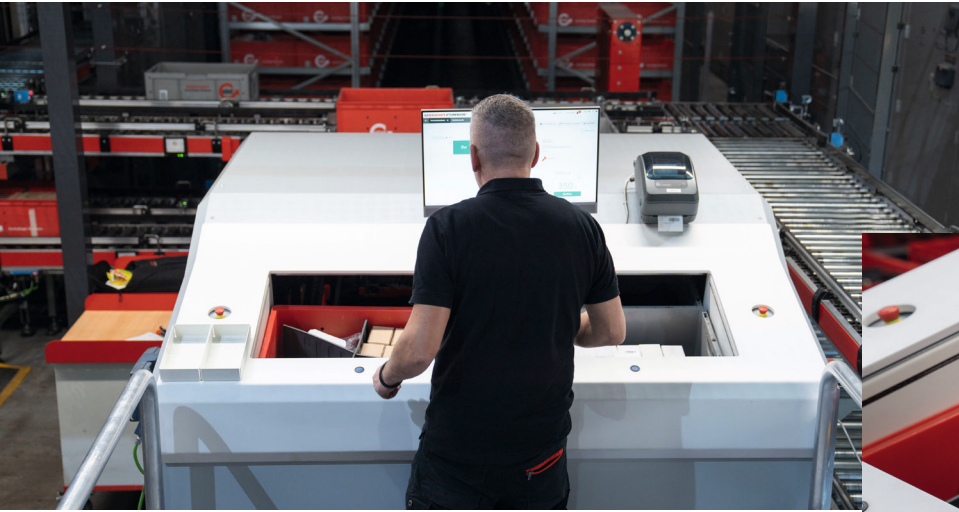

SimplePick Flexible and SimplePick Speed

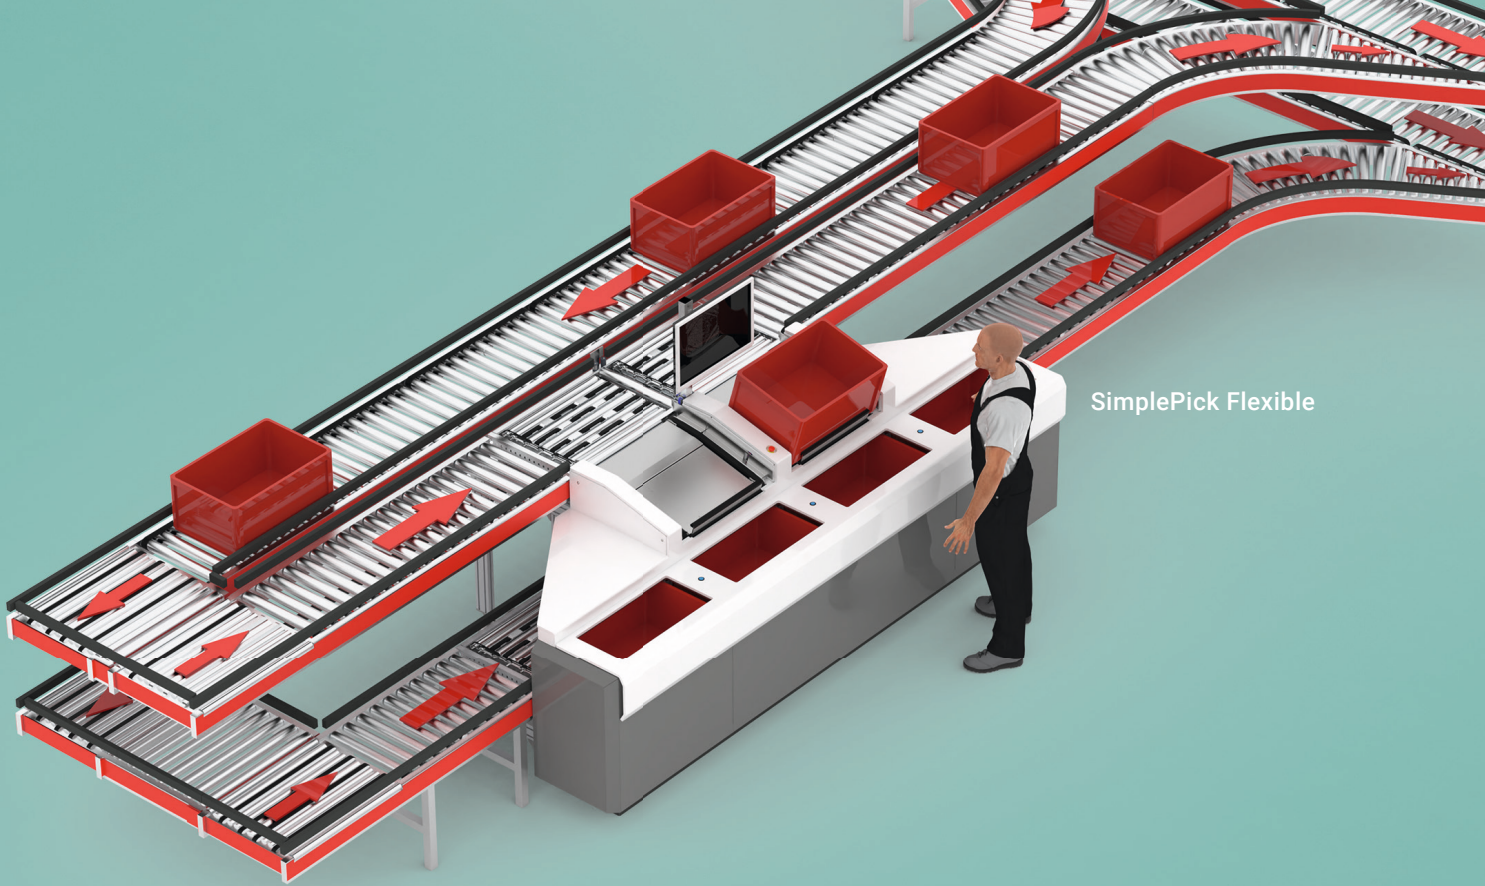

**EFFICIENT ORDER PICKING WITH THE
GEBHARDT SIMPLEPICK FLEXIBLE AND SIMPLEPICK SPEED**

With the GEBHARDT SimplePick Flexible and SimplePick Speed workstations we offer you innovative, ergonomic and flexible solutions for your order picking processes. Whether it is high picking speeds, working according to ergonomic design principles or connection to various conveyor systems - our workstations are designed to increase your efficiency and relieve your employees. Increase your picking performance and employee satisfaction with GEBHARDT workstation solutions!

Our customers in e-commerce, omni-channel fulfilment, distribution and shipping are already benefiting from GEBHARDT goods-to-person picking solutions.

SimplePick Speed

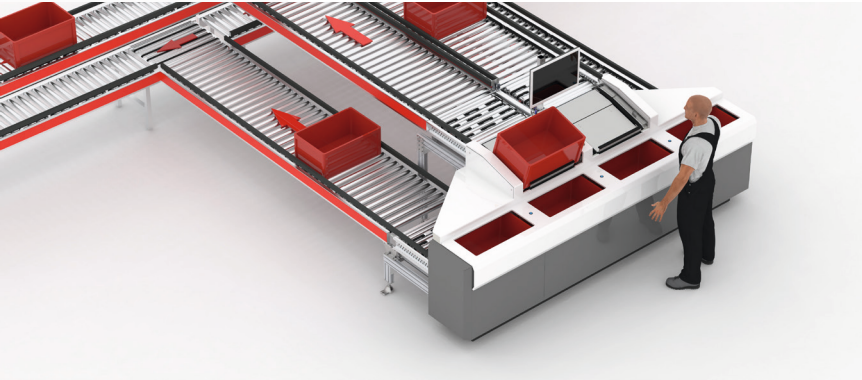

GEBHARDT WORKSTATION SOLUTIONS:

- **Reducing sickness absence:** The ergonomic design of the workstations contributes to the health of order pickers, minimising sickness absence.
- **Increased employee motivation:** Improved working conditions and reduced physical strain increase the well-being and motivation of workers.
- **Flexibility and versatility:** GEBHARDT workstation solutions are versatile and can be adapted to a wide range of order and product structures.
- **Optimisation of intralogistics:** Our solutions can be seamlessly integrated into existing conveyor technology, the established GEBHARDT miniload solutions or storage systems, such as GEBHARDT Upstream®, and simplify order processing.

**SIMPLEPICK FLEXIBLE:
ERGONOMICS AND MODULARITY COMBINED**

The GEBHARDT SimplePick Flexible is a modular order picking workstation, designed according to ergonomic principles and perfectly suited for goods-to-person order picking. This workstation can be adapted to your individual requirements in various configurations (2:2, 2:4 to 2:8). Thanks to its modern design, the order picker is optimally integrated into the industrial environment and optimally supported in his daily work. The GEBHARDT SimplePick Flexible is a pioneering solution that puts the health and well-being of the order picker first. The workstation is characterised by a unique mode of operation in which all work steps are performed exclusively from top to bottom using gravity. At the same time, the rotation of the upper body is minimised, significantly reducing the strain on the spine, joints and strained muscles.

The provision of two source containers on the GEBHARDT SimplePick Flexible is also suitable for warehouses with a high product variety. The integrated tilting mechanism allows ergonomic order picking despite two gripping levels. The totes are already tilted by 15 degrees without a separate tilting process - after the tilting process a 30 degree tilt is guaranteed. The provision of two source totes and continuous tote changing minimises dead time during order picking: Container I is replaced by a new one from the warehouse, while picking takes place from container II. This means that the changeover time is not included in the picking time.

THE BENEFITS AT A GLANCE:

- Ergonomic workstation design
- Modular configurations (2:2, 2:4 or 2:8)
- Reduced strain on spine, joints and muscles
- Ergonomic gripping levels thanks to integrated tilt mechanism over two gripping levels
- Minimised dead time with two source containers and continuous container changeover
- Efficient totes provision with 15 degree tilt and 30 degree tilt after tipping to ensure smooth order picking.

**GEBHARDT SIMPLEPICK SPEED:
HIGHEST SPEED, BEST SUPPORT**

When it comes to high pick rates and speeds, the GEBHARDT SimplePick Speed workstation is the ideal solution. The picking workstation with a 1:1 source/destination relationship has been ergonomically redesigned to provide the best possible support for the operator. With patented technology, an optimised swivel arm for changing containers and safety measures even with the highest picking numbers, this workstation enables smooth and fast picking.

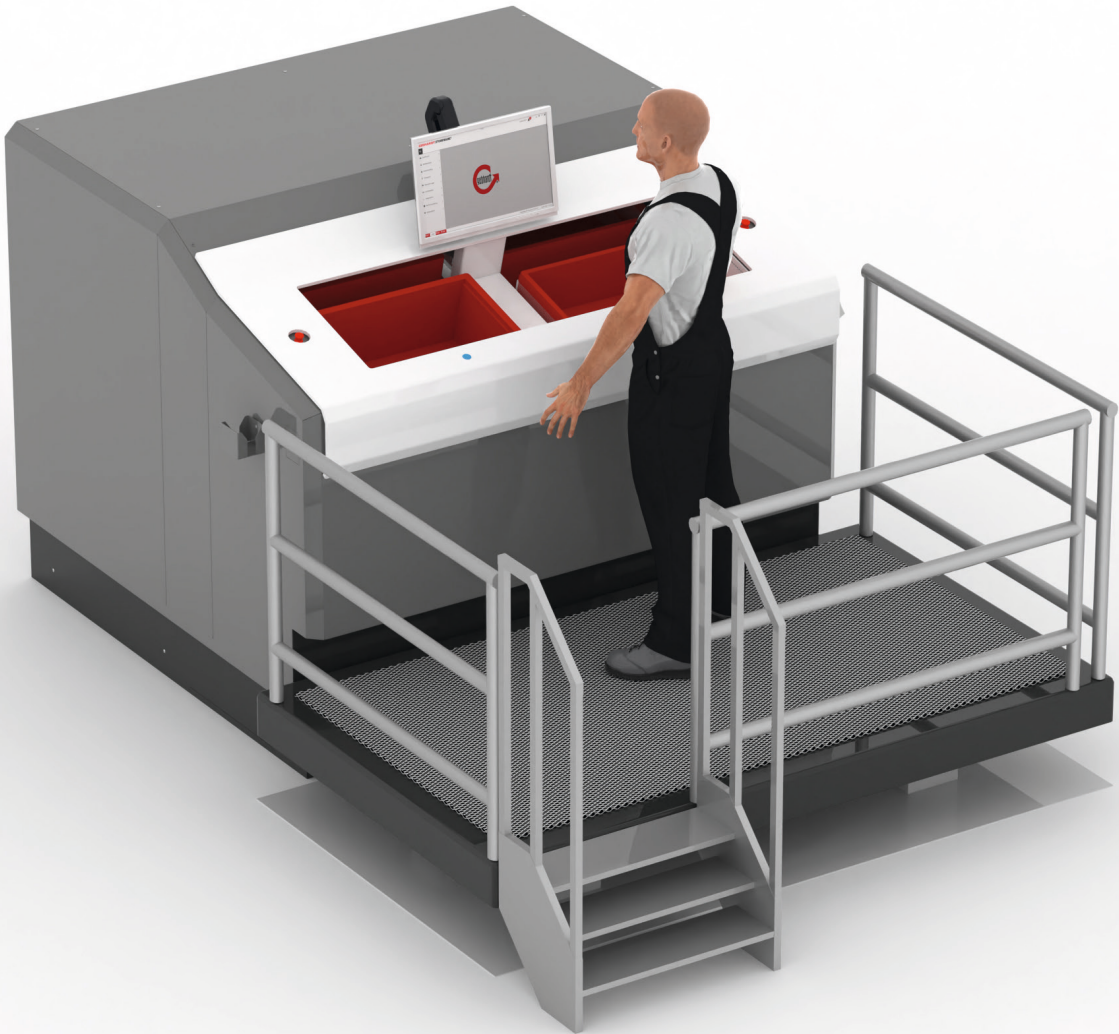

The GEBHARDT SimplePick Speed can be seamlessly integrated with Pick-by-Light systems to further increase picking accuracy and efficiency. This enables operators to select the required order-related items quickly and accurately. The GEBHARDT Simple Pick Speed minimises walking distances for employees thanks to the intelligent arrangement of the bins and the ergonomic design.

The GEBHARDT SimplePick Speed is the efficient, user-friendly and highly dynamic solution for order picking. The combination of patented technology, ergonomic design, compatibility with modern technologies and a space saving design makes it an excellent choice for companies looking to optimise their order picking processes.

THE BENEFITS AT A GLANCE:

- Ideal for warehouse environments with high pick rates and speed requirements.
- Ergonomic certification
- Patented technology and optimised swivel arm for changing totes.
- Safety at high pick rates
- Integration of Pick-by-Light systems
- Minimise walking distances with intelligent tote layout and ergonomic design.
- Space-saving design

NEXT GENERATION INTRALOGISTICS

Already in its third generation, the name GEBHARDT is closely associated with innovative intralogistics solutions. The company has always developed, manufactured and installed individual products as well as complete turnkey solutions. The portfolio includes storage systems, conveyor systems, sorting and order picking systems as well as goods lifts, automated guided vehicles and software applications.

The complete range of solutions, intelligent software and life-cycle services enables the most reliable and efficient automation technology for retail & e-commerce, food & beverages, automotive, healthcare, contract logistics, fashion & consumer goods and industry.
